

Day 01

MYSQL Workbench Installation.

1. Download the MySQL Installer

- Go to the official [Download MySQL Workbench](#) page.
- Scroll down to **MySQL Community (GPL) Downloads** and click on the **MySQL Installer for Windows** link.
- Choose the MSI Installer file. You will be prompted to log in or sign up; simply bypass this by clicking "**No thanks, just start my download**". [\[1\]](#), [\[2\]](#), [\[3\]](#)

2. Run the Installer and Select Products

- Locate the downloaded .msi file (usually in your *Downloads* folder) and double-click to run it. Accept any User Account Control (UAC) prompts. [\[1\]](#), [\[2\]](#), [\[3\]](#)
- On the Setup Type window, select **Custom** to choose exactly what you need. [\[1\]](#), [\[2\]](#)
- Browse the product list and navigate to **Applications > MySQL Workbench**. [\[1\]](#)
- Select the latest version and use the green arrow (or drag it) to move it to the *Products/Features to be Installed* list. [\[1\]](#)
- *Optional:* If you do not already have the database engine installed, expand **MySQL Servers** and drag the latest MySQL Server into your installation list as well. [\[1\]](#)

3. Install

- Click **Next**, then click **Execute** to download and install the selected tools.
- Wait for the progress bar to complete, then click **Next** and **Finish** to close the installer.
